

# **Chemical Wastes**

**PCBs**

# **Polychlorinated Biphenyls (PCBs)**

- **Used in electrical equipment**
- **Potentially carcinogenic**
- **Use discontinued (1977-1990)**
- **Need to be safely disposed off**
  - ◆ **Liquid**
  - ◆ **Contaminated equipment**
  - ◆ **Contaminated solids  
(e.g., soil, etc.)**

**Biphenyl**

**PCBs ( $x+y \geq 2$ )**

**Chlorinated dibenzofurans**

**Chlorinated dibenzo-p-dioxins**

# **Processes for Destroying PCBs**

- **Incineration (> 1200°C)**
- **Cement kiln (incineration)**
- **Plasma arc**
- **Miscellaneous (>80)**

# **Incineration of PCBs**

## **- Limitations**

- **Licensing difficult**
  - **License denied in Boston**
- **Solids need to be heated to 1200°C to pyrolyze small amounts (ppm)**
- **Costs \$1-2/kg for liquids, very high for solids**

# **Radiolysis Process**

## **-Advantages**

- **Absence of oxygen - no dioxins or dibenzofurans**
- **On-line monitoring**
- **Bulk PCBs and PCB-contaminated items**
- **Toxic waste → useful products**

## Key Reactions

Overall reaction

## **Estimated Costs for Radiation Processing of Liquid PCBs (in 1987\$)**

<b>Radiation Source</b>	<b>Maximum Rate (kg/h)</b>	<b>Cost (\$/kg)</b>
<b>Mobile facility (200 kCi Co-60)</b>	<b>9</b>	<b>13.95</b>
<b>Permanent Facility 1 MCI Co-60</b>	<b>101</b>	<b>4.22</b>
<b>40 kW accelerator</b>	<b>195</b>	<b>2.1</b>
